ONE DAY COURSE

Maternal medicine: multi-disciplinary approach of pregnancy complications

26 SEPTEMBER 2019

Pregnant women with pre-existing medical conditions present a challenge to treating physicians in order to guarantee best possible outcome for them and their children. They require a multi-disciplinary approach, requiring doctors from different disciplines to closely link and collaborate.

Combining theory and practice, lectures will be followed by case histories and clinical discussions

with participants on diagnosis and management of women, with an emphasis on possible variations in management between clinics.

There will also be a 'mock' multi-disciplinary meeting with input from various specialists. We aim for you to be inspired and return to your workplace with increased knowledge and motivation to improve care for high-risk pregnant women.

PROGRAMME

State of the art lecture: thrombo- embolism in pregnancy

Prof. dr. C. Nelson-Piercy, obstetric physician, Guy's And St. Thomas' HNS Foundation Trust, Londen, United Kingdom
