_____ Nr. _____
At Nr. _____

The Public Medical Sanitary Institution Institute of Mother and Child (PMSI IMC) is a republican medical institution of 3-rd level, which offers medical care based on the conception of practical application of technological innovations in public medicine, in purpose to improving the maternal and child health assistance, treatment and rehabilitation of patients, reducing infant mortality and disability, and promoting a healthy life style. The Institute profile is the protection of maternal and child health, according to state policy in science and innovation and in line with the priorities of the state strategy. It's a leader in the field of obstetrics, gynecology, neonatology, pediatrics and surgery that assures diagnosis, medical care and rehabilitation of approximately 40.000 hospitalized patients and 150.000 outpatients consulting from all over the country. Also PMSI IMC records over 5500 births annually. At the moment, the institution has a total capacity of 1003 beds and more than 2,000 workers (medical and administrative staff).

Taking into account the crisis created by COVID-19 in the entire world, the Institute of Mother and Child, according to the order of the Ministry of Health of the Republic of Moldova, became one of the main institutions that fought and continue to fight with this devastating virus, redesigning for this, special sections for the treatment of severe and very severe patients with COVID-19. Also, as a result of the outbreak of the *disastrous and inhuman armed conflict in the neighboring country, Ukraine*, the Institute of Mother and Child managed to mobilize and thus make every effort to provide quality medical care, in conditions of maximum comfort, to refugees (children and mothers) that need help.

In these circumstances, PMSI the Institute of Mother and Child respectfully requests your presence and involvement in our projects, initiatives and campaigns that will allow the development and the progress of maternal and child health care in Republic of Moldova.

We would be grateful if you would accept to support us in order to create optimal conditions for all patients of medical institution, because each child, each pregnant woman is the key element of society, of a country that deserves to live in peace, to be protected and helped.

With profound respect,

Director

Sergiu GLADUN
